## Summary

I have worked on many different projects, whether in front or backend  that focuses on programming and design, such as site creation and redesign, during the study stages, whether bachelors or masters.

I'm a software engineer who is very comfortable communicating with clients, peers, and administration.

I bring both knowledge and experience of popular programming languages to your company including Java and Python, JavaScript, HTML, and CSS.

I worked for 4 months in a company that was responsible for producing marble in the Kingdom of Saudi Arabia as data entry at the beginning and then as a supervisor for workers in the IT sector.

My work as a software engineer must be able to communicate professionally with the customer, and that has benefited me from the group's management while working for projects in the school stage, whether it is the undergraduate or masters level, the ability to understand the clients and communicate with him well. I boosted my desire for management, which in turn became a passion.
